## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on July 9, 2004 has been entered.

Claims 21-40 are currently pending.

### ***Claim Objections***

2. Claim 38 is objected to because of the following informalities:

In claim 38, line 7, the period "." should be changed to a semicolon ";", as a claim is supposed to be comprised of only one sentence. Appropriate correction is required.

### ***Specification***

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 21-40 are rejected under 35 U.S.C. 102(b) as being anticipated by Gormley (U.S. Patent 5,708,627).

Regarding claims 21-40 Gormley discloses (see Fig. 1) an alarm clock or apparatus configured to sense changes in light intensity, comprising: a display (14) configured to display a passage of time; a photosensitive cell (42) configured to sense changes in an amount of light in a room; a controller (microprocessor; not shown) configured to receive information from the photosensitive cell, wherein the controller provides an auditory cue (see col. 2, lines 30-35) or visual cue (see col. 3, lines 10-13) upon a change in the amount of light; a speaker and/or light (see col. 2, lines 30-35 and col. 3, lines 10-13) configured to provide the auditory or visual cue; a programmable memory (digital chips; not shown) configured to send and receive information from the controller; a switch (22) configured to activate an alarm; and a shutoff (28) configured to deactivate the alarm. Gormley also discloses (see col. 4, lines 10-67) a transceiver configured to send a signal, containing a message, by a telecommunication line.

#### ***Response to Arguments***

6. Applicant's arguments with respect to claims 21-40 have been considered but are moot in view of the new ground(s) of rejection.

#### ***Conclusion***
